

## **How to Make Glow in the Dark Chalk**

Follow these simple instructions from [Growing A Jeweled Rose](#) for how to make glow in the dark chalk:

Combine a small amount of glow in the dark paint, or fluorescent paint, with water in a mixing bowl. This paint is available at most craft stores.

Continuously add plaster of paris to your mixing bowl until you reach a very thick, wet, consistency.

Spray some cooking spray on the bottom of an ice cube tray and spoon the mixture into the sections. Make sure to really pack it down!

Leave your chalk to dry for roughly 12 hours

Once dry, pop the trays in the freezer for 10-15 minutes to help the chalk pop out.
